

Know Your Change Impact

What is the difference between Interface Files & Spreadsheet Uploads?

Interface Files...

...are automated data exchanges between Florida PALM and interface partners via the Florida PALM Managed File Transfer (MFT) server.

...will be tested during Interface Testing Cycle 2, and again during Cycle 3 end-to-end testing (pending successful testing in Cycle 2).

...will notify the interfacing partner via email of any errors once the batch file has processed.

...are built by agencies / business systems in accordance with Interface File Layouts.

...do not allow the use of SpeedKeys.

Spreadsheet Uploads...

...are uploaded directly into Florida PALM by Agency users with appropriate Florida PALM module roles.

...will be tested by end users during both UAT Online and UAT Full.

...will return any errors online in Florida PALM once the upload file has processed.

...require the use of template file(s) provided by the Project.

...allow the use of SpeedKeys.

Spreadsheet uploads were discussed in the **Segment II Design Workshop**. Presentations and videos are available on the Florida PALM website. Additionally, the **Knowledge Center** has information about Interface files.
